

COMPANY PROFILE · 2026

Easy Technology

— We build the software your business runs on.

Operating systems, web platforms and mobile apps, end to end.

ABOUT US

A software company from Kurdistan, building to a global standard.

WHO WE ARE

Easy Technology started in 2019 with one goal: to build software that makes business easier.

We create mobile apps, web platforms, operating systems and custom software that people use every day. From new startups to growing businesses, we help turn ideas into reliable digital products.

Everything is built in house, from the first idea to launch and beyond. We stay with our clients long after release, improving, supporting and growing what we build together.

250+ PRODUCTS DELIVERED

20,000+ STUDENTS TAUGHT

 **Erbil** · Queen Towers

 **Duhok** · Power Gate Building

Built by people who ship.

A WORD FROM OUR CEO

EASY TECHNOLOGY · ERBIL OFFICE

Our team, at work

“

With 19 years of experience in software development, my goal is simple: to help businesses and organizations grow through powerful, practical technology. At Easy Technology, we build solutions that solve real problems and deliver lasting value.

Osama Jassim

Chief Executive Officer

Most companies buy their software. The ambitious ones have it **built**.

We build the operating systems a business runs on, its operations, its clients, its money and its mobility, plus the apps its customers keep on their home screens. All of it native, cloud based, and built to be leaned on. We call them operating systems for a reason. Each one runs a real part of a real business, every single day.

Systems

Command centers that run operations, sales, finance and fleets, in one place.

Apps

Mobile products people use every day, native on iOS and Android.

Platforms

Marketplaces that connect buyers, sellers and whole communities.

“If it runs a business or lives on a phone, we can build it, and we probably already have.”

Software sections we work with.

We design and build software across the sections that businesses actually run on.

Business Systems

Operations, teams and internal workflows.

Mobile Apps

iOS and Android apps for real users.

Web Platforms

Portals, dashboards and web tools.

Ecommerce

Online stores and marketplace solutions.

Finance Systems

Payments, wallets and money management.

Booking Systems

Reservations, scheduling and service booking.

When it has to perform, we build **native**.

Every app we ship is written natively for iOS and Android. No shortcuts and no wrappers, so each one runs at the full speed and quality the device can give.

True Performance

Native code runs as fast as the hardware allows, with nothing in between.

Compiled to device

No bridge, no lag

Smooth, Always

Fluid scrolling and animation at a steady sixty frames per second.

Steady 60 FPS

Fluid transitions

Full Device Access

Camera, GPS, sensors and notifications, all first class.

Camera & GPS

Push notifications

Reliable Everywhere

Fast and stable, even on a weak connection.

Offline first

Weak network ready

iOS and Android, done properly

Built with each platform's own native tools.

SWIFT

KOTLIN

SIXTY FPS

Make powerful software feel simple, so a business can just run.

We measure ourselves by what works and keeps working, not by what we promise. Good software should get out of the way and let people get on with running their business.

Reliable by default

Native & fast

Built to last

Supported after launch

WHAT WE HAVE BUILT

The numbers, and the names.

Seven years of building, counted in products delivered, people taught and businesses running on our software today.
